VAUGHAN'S *American Grown* TULIPS

TWO years of war, shutting off Dutch imports, have proved beyond question the quality of Vaughan's American tulips, grown in the Pacific Northwest. In gardens and greenhouses throughout the country they have shown their beauty, vigor and variety.

The future of Dutch tulips is in doubt; invasion seems to have dealt the industry in Holland a mortal blow. But gardens throughout the world will continue to be gay with this loveliest flower of spring.

As the pictures on this page demonstrate, the tulip has found a new home!

Mt. Hood, Fifty Miles Away, is Seen in the Background of This Field of Vaughan's Tulips Growing Near Portland, Oregon.

AMERICANS are called upon for great sacrifices to win the war. But they are urged by our national leaders to maintain the beauty of their gardens.

Addressing seedsmen of the country in convention at New York, June 23, 1942, Dr. H. W. Hochbaum, of the Department of Agriculture, stated the 1943 policy of the Victory Garden campaign as follows:

"Shall we not maintain and increase nation-wide interest in making our everyday environment more attractive? ** Many thousand city and town people do not have the ground to grow vegetables. Let them if they wish, join a community plot garden group, but also encourage them to preserve and enhance the ornamental and joy-giving features of continued landscape embellishment."

Our country is facing an eventful winter, during which the future of the world may be decided. What shocks, what privations, what disappointments or triumphs it may bring, we cannot tell. But we know that spring shall come again, and when it comes, let us make sure that we shall look out upon a reborn scene of beauty. In its effect upon morale, a tulip flower may be as important as a shell casing.

You can buy and plant spring bulbs, in confidence that nothing is thereby taken from the war effort. No materials need be used, which are needed elsewhere.

For the third year, our supply of bulbs is limited to those produced in this country, or imported

In the Foreground is Yellow Giant, First Yellow of the Darwin Type to Be Produced.

from England. The total will be but a fraction of those which were planted here each fall before Holland was invaded.

All doubt about the quality of Vaughan's American grown tulips has vanished, since for two years they have provided the most beautiful garden displays, and the finest greenhouse plants and cut flowers throughout the country.

Their latest triumph was in the tulip garden illustrated on our front cover, which won a gold medal at the great National Flower and Garden Show, held in the International Amphitheater, Chicago, Ill., last March.

**VAUGHAN'S
CHICAGO
PARKS
LAWN SEED**

AUTUMN is the most favorable time to sow lawn seed, the earlier the better. In the short days and cool nights the seedling plants make vigorous growth. Give them all the time possible to become established before freezing weather arrives.

In the fall it is more important than ever to sow only permanent grasses, free from short-lived, coarse growing types. For a lawn of permanence and beauty, our famous Chicago Parks mixture is recommended, containing only fancy, re-cleaned seed of fine leaved, hardy, lasting grasses of high purity and germination. It contains no timothy, or other coarse adulterants. Remember, cheap mixtures invariably disappoint and increase rather than reduce expense.

We offer Chicago Parks mixture without Clover as "Fairway Mixture" at Chicago Parks prices.

Vaughan's "Private Estate" Bent Formula

For those interested in a deluxe mixture we highly recommend our Private Estate formula. This formula contains over 98% pure seed and is free of all noxious weeds.

In addition to Kentucky Blue Grass of the highest quality, to insure a durable and resistant foundation for your lawn, Private Estate formula includes an important proportion of bent. It produces a heavy turf of very fine texture. This mixture is equal or better in purity to the highest priced mixtures and most important, it contains more bent seed. It is the best value on the market.

Price, 1 lb., 60c; 2 lbs., \$1.20; 3 lbs., \$1.75; 5 lbs., \$2.85; 10 lbs., \$5.50; 15 lbs., \$8.15; 20 lbs., \$10.75; 25 lbs., \$13.25; 100 lbs., \$49.00.

Vaughan's "Columbian"

When making a lawn on sandy soil or in moderate shade, conditions are met with which require the use of a special grass seed blend. Vaughan's "Columbian" is the correct blend for such locations.

Price, 1/2 lb., 35c; 1 lb., 55c; 2 lbs., \$1.10; 3 lbs., \$1.60; 5 lbs., \$2.60; 10 lbs., \$5.00; 15 lbs., \$7.40; 20 lbs., \$9.75; 25 lbs., \$12.00; 100 lbs., \$45.00.

Vaughan's Dense Shade Formula

Composed of grasses most suited for growing in heavily shaded situations. A splendid mixture. It is also satisfactory in light shade.

Price, 1/2 lb., 40c; 1 lb., 65c; 2 lbs., \$1.30; 3 lbs., \$1.90; 5 lbs., \$3.10; 10 lbs., \$6.00; 15 lbs., \$8.90; 20 lbs., \$11.75; 25 lbs., \$14.50; 100 lbs., \$55.00.

Vaughan's No. 25 Lawn Formula

An economy blend for new seedlings and quick results which should be followed by reseeding with a more permanent blend like our "Chicago Parks." In spite of its low price, this blend does not contain timothy. Sow at the rate of 1 lb. to every 200 sq. ft. Begin cutting when grass is 3 to 4 inches high and continue to cut regularly to keep turf fine.

Price, 1 lb., 35c; 2 lbs., 70c; 3 lbs., \$1.00; 5 lbs., \$1.60; 10 lbs., \$3.00; 15 lbs., \$4.35; 20 lbs., \$5.75; 25 lbs., \$7.00; 100 lbs., \$25.00.

Fancy Kentucky Blue Grass (Poa Pratensis)

EXTRA HEAVY SUN-CURED SEED—Specially re-cleaned. Price, 1/2 lb., 25c; 1 lb., 45c; 2 lbs., 90c; 3 lbs., \$1.35; 5 lbs., \$2.20; 10 lbs., \$4.00; 15 lbs., \$5.90; 20 lbs., \$7.75; 25 lbs., \$9.50; 50 lbs., \$17.00.

Seed of the Bent Grasses

For lawns the Bent grass seed is preferred to the creeping Bent stolons because these types of Bent do not grow so rapidly and do not require so much cutting and top dressing. Seed at the rate of 3 to 4 lbs. per 1000 square feet.

ASTORIA BENT GRASS. This grass has creeping roots which throw up new shoots and make a very thick turf. It makes a splendid lawn and golf grass. MODEL STANDS BETWEEN ROWS OF VAUGHAN'S WHITE COTTAGE TULIP CARRARA

Cottage Tulips

COTTAGE tulips are inclined to have pointed petals, sometimes turned back, and the blossom to be smaller and more slender. But they harmonize perfectly with the Darwins and Breeders and supply a quality of clear, bright color which these lack. They blossom a few days later than the Darwins, often carrying the flowering period of Spring bulbs into the early days of June, especially if planted in a shady position. Light shade also lengthens stems.

Red and Orange

Gesneriana Major (24 in.) From the time of opening until the petals fall, this tulip makes a marvelous display. The flowers are typical Cottage form; long, egg-shaped, deep red in color, with dark blue base. Doz., \$1.65; 100, \$12.00.

Caledonia (25 in.) Orange-scarlet, yellow base marked greenish black. Doz., \$1.40; 100, \$10.00.

Grenadier (20 in.) Magnificent light orange. When the sun shines on a fully expanded flower of this variety the color is dazzling. Flower long, on graceful stem. Doz., \$1.65; 100, \$12.00. Second Size, Doz., \$1.40; 100, \$10.00.

Orange King (23 in.) Deep orange, inside of cup deep orange-scarlet with yellow center. Globular flower, sweet-scented. Doz., \$1.65; 100, \$12.00. Second Size, Doz., \$1.40; 100, \$10.00. (Illustrated in Color on Cover B.)

Pink and Rose

Dido (26 in.) Superb in form, poised erect on a straight stem, we know of no other tulip that has more fragrance and brilliant coloring than Dido. It is a deep, rich pink with salmon lights, suffused and slightly edged orange. Doz., \$1.65; 100, \$12.00. Second Size, Doz., \$1.40; 100, \$10.00.

Inglescombe Pink (24 in.) Warm pink tinged orange near edges of petals when it first opens. Age makes this tulip more beautiful, as after the first few days it changes to pure pink. Doz., \$1.65; 100, \$12.00. Second Size, Doz., \$1.40; 100, \$10.00.

Maiden's Blush (20 in.) The old English Picotee; snow-white with a margin of rose. The petals are very pointed and reflex beautifully. Doz., \$1.80; 100, \$13.00. Second Size, Doz., \$1.50; 100, \$11.00. (Illustrated in Color on Cover B.)

Mimosa (28 in.) Indide primrose-yellow, outside bluish white with a faint red shade on the outer petals, beautiful black base with broad, yellow edge, enormous perfect flower of oblong shape, tall erect stem. Doz., \$1.80; 100, \$13.00.

Rosabella (18 in.) This graceful tulip can be compared to the loveliness of a rose bud. Pure pink in color, it possesses great charm. Doz., \$1.65; 100, \$12.00.

MIXTURE

VAUGHAN'S BREEDER TULIPS GROWING IN OREGON

Single and Double Early Tulips

TWO OR THREE weeks of brilliant color in April, following the daffodils and preceding the Darwin tulips, are supplied by the early tulips and among them can be found varieties as beautiful and with flowers as large as anything the May-flowering classes can produce.

Explanatory. The number following the name of the variety denotes the height in inches, while the (a's) flower together and are earliest; the (b's) flower together, but are somewhat late.

Yellow and Orange

General DeWet 10a. Beautiful deep orange, shaded golden yellow at the base of the petals. A very fragrant flower and one of the finest varieties in cultivation. There is no other orange variety which equals it in brilliancy. It is therefore one of the showiest bedders, and as it forces splendidly we can recommend it for all purposes. Doz., \$1.65; 100, \$12.00.

It remains a distinctive flower, a great bedding tulip, and one quite good for forcing. It is a strong, healthy grower, and a bed of it will bring into the early spring garden some of the color and joy for which we have longed for so many months. Doz., \$1.65; 100, \$12.00.

Fantasy is the most beautiful of the Parrot tulips. Originating as a sport of the famous Clara Butt, the famous true pink Darwin, it has the color of its parent, and the enormous 3½ inch fringed petals of the Parrot type. A group of Fantasy tulips in your border will be a center of interest in the tulip season.

New Race of Triumph Tulips

NOT since the Darwin race was introduced, has so great an improvement been made in the tulip family, as in the new Triumph class. Here are early tulips—coming at a time when every bit of color in the garden is more precious because there is so little of it—with stems as tall, flowers as large and colors even more brilliant than the Darwins. A hybrid of the Darwin and early singles, the Triumph tulips have a distinctive beauty of their own, and a clear luminous color quality which will make you treasure them. Two full weeks are added to the tall tulip season by planting these.

DOUBLE TULIPS IN OUR OREGON FIELDS

Species Tulips

For the Rock Garden and Hardy Plant Border

The general characteristics of the various species, all of which are natives of Asia Minor and Central Asia, are bright colors and recurved petals. These Tulips do not always feel happy in their new surroundings and after two, or possibly three, seasons they will disappear. With care and the provision of suitable quarters they will flower quite satisfactorily. They feel best contented in rock gardens and borders.

Australis (Celsiana) Yellow, tinged on outside of petals reddish bronze, a pretty species somewhat resembling T. Sylvestris, is found growing in Spain and Southern Europe. Height 16 inches. Flowering in April. Doz., \$1.65; 100, \$12.00.

★Kaufmanniana (The Water Lily Tulip). Large, creamy flower, brilliantly marked with carmine-yellow center. Flower opens flat and is carried on a stem usually 6 inches in height. Blooms early in April. The bulbs should be planted six inches deep. Splendid for naturalizing in shady places; self-sows freely. One of the first to flower. Height 5 to 7 inches. Doz., \$1.80; 100, \$13.00.

Vaughan's Special MIXTURE Single Early Tulips

All the colors are included in this mixture, growing to approximately the same height, producing the correct effect in beds. Doz., \$1.35; 100, \$9.00.

Plant American Grown Daffodils This Fall

THE extensive daffodil production which has been built up in this country during the last fourteen years provides a plentiful supply of first quality bulbs, including most of the finest new varieties.

We offer a complete list of standard varieties, and novelties, all grown in the Pacific Northwest, where experience has proved the highest quality bulbs are produced.

Where to Plant Them

Daffodils are particularly fine subjects to plant under the edge of bushes or among perennials in the hardy border as they seem to like to nestle among the roots of their neighbors. A clump of golden trumpets peeping from beneath the overhanging branches of Spiraea Van Houttei or nestling in a sheltered angle of a building are one of the gladsome sights of early spring.

A few bulbs can be tucked into odd corners all about the garden and they will repay mightily when the first sunny days of spring bring their sturdy shoots breaking through the earth.

Daffodils and narcissi need not be moved for several years if they are flourishing, in fact not until the clump becomes so large that it is evident it needs to be divided and they should be replanted at once.

Trumpet

Aerolite A golden giant with flowers beautifully proportioned, perianth deep primrose, with a pure medium yellow trumpet left in bold relief by outer petals, an inch and a half wide; medium early but one of the longest lasting of all daffodils either in the garden or after being cut. Each, 25c; doz., \$2.20; 100, \$15.00.

★Emperor A magnificent sort. The entire flower is a rich yellow trumpet of immense size and petals so broad that they overlap. Each, 15c; doz., \$1.50; 100, \$10.00.

Glory of Sassenheim Flowers large and erect, with creamy white perianth of remarkable breadth and good quality; the trumpet is a clear rich yellow and frilled at mouth. Each, 15c; doz., \$1.50; 100, \$10.00.

(Illustrated in Color on Inside Back Cover)

★King Alfred "The King of Yellow Daffodils." Tall, vigorous, golden yellow flower, of elegant form. The expanded trumpet measures 2½ inches in diameter, the perianth proportionately large and segments gracefully twisted. Height, 24 inches. Double Nose Bulbs. Each, 25c; doz., \$2.50; 100, \$16.00. First size Bulbs, Each, 15c; doz., \$1.50; 100, \$10.00.

12 Daffodils for \$1.00 Naturalizing

12 Bulbs, \$1.00; 100 Bulbs, \$7.00; 1,000 Bulbs, \$65.00, Prepaid.

DAFFODILS are the first major flowers to bloom in the spring. By nature they are informal flowers, and look best when grown in drifts, in the shrubbery or under trees. They like to nestle among the roots of shrubs, and as they bloom before the leaves develop, they thrive in places which later in the season are well shaded. Our naturalizing mixture is an exceptional value, containing many of the best named Trumpet, Leedsii, Star and Poeticus varieties. Plant them and do not disturb until they crowd; the bulbs may then be lifted and replanted over a much larger area. A purchase of bulbs is an investment which will pay in bloom for a lifetime.

25 Daffodils for \$1.50. Smaller bulbs but of flowering size, packed in a special decorated bag with cultural instructions. Prepaid.

Hardy Bulbous Iris You Can Grow in the Garden

ADMIRERS of the iris will find this group to be valuable additions to their collections. Flowering in late June and early July, they follow the bearded and Siberian irises, prolonging the display and producing flowers of a distinct type and quality of coloring. The colors are clear and brilliant, and the petals are delicate, but of excellent substance. They make quality cut flowers, lasting fully a week in water.

The Dutch iris have displaced the Spanish iris, from which they were developed. Both they and the English iris are successfully grown in localities which have sub-zero temperatures in the winter. In the cold winter states they should have the protection of a heavy mulch, applied after the ground has frozen and should be planted in a location where spring growth is not unduly stimulated, so they will not get a premature start, and suffer injury from belated frosts.

Bulbs should be dug each year after foliage has turned brown. They should be cured quickly in a dry location, and only the largest bulbs should be replanted for flowering. The smaller bulbs can be grown in a nursery row until they reach flowering size. The increase is rapid and bulbs which are not lifted will crowd and stop flowering.

ENGLISH IRIS

These magnificent bulbous Irises thrive in any ordinary garden soil but prefer a good loam. The earlier the planting, after beginning of September, the greater the success; the bulbs should be planted 4 inches deep. The varieties we have especially selected as being the very finest and most distinct in cultivation, and they will be found as strikingly beautiful in color as many of the sumptuous orchids. They flower from end of June to beginning of July thus succeeding the Bearded Flag Irises, Early Xiphium and Spanish Irises. As cut flowers they take a first place

IRIS TINGITANA WEDGEWOOD

For indoor use and protected plantings. A seedling of the old favorite Tingitana that is just as early, but a much more reliable bloomer. The small cultivator will do better to plant his bulbs, six or eight according to size, in a seven- or eight-inch pot, rather than in ordinary shallow boxes. Not only are bulbous irises deep rooting but they are very sensitive to root injury. If after boxing, they are stood on the ground or on ash-covered beds and root through at the bottom, it is hundred to one that half of them will come blind if the boxes are disturbed. In deep pots the roots are less likely to root through at the bottom, and treated rightly in other ways, they will flower 100 per cent. They must be kept cool, 45 degrees or so, until the buds are out of the neck. A great cut flower. Light blue in color. 8-9 ctms. for outdoor planting. Doz., 60c; 100, \$4.00; 1,000, \$35.00. 10 ctms. up for indoor growing, doz., \$1.35; 100, \$8.50; 1,000, \$80.00.

IRIS RETICULATA

Fragrant Iris—Hardy with Protection

RETICULATA. This lovely species is one of the treasures of the garden or rock garden. It can best be described as a small form of the Spanish or Dutch Iris. Its main value lies in the fact that it may be forced into bloom in the house with the greatest ease. Six or eight bulbs put into a 4 or 5-inch pot when received will bloom about Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Perfectly hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rockery. To show it off well, plant a number of bulbs under the white Arabis Alpina; you'll enjoy the results more than we can tell you. Each, 20c; doz., \$2.00; 100, \$15.00.

GRAPE HYACINTHS (Muscari)

Muscari, or Grape Hyacinths, are a race of spring-flowering bulbous plants which thrive in American gardens. They are not showy when only a few are seen together, but a drift of them presents a picture of beauty, especially if planted with late tulips, for which purpose they are well adapted. The species also look charming in clumps in the rock garden or border, and the Feather Hyacinth (*M. plummosum*), in particular, may be employed, with great gain, in pots in the cold greenhouse. In fact, pot culture gives this Grape Hyacinth such delicate and uncommon coloring, that it might well be grown anywhere under glass. All are very accommodating in their requirements, but prefer a good loam with a little old manure dug into it, and, in the case of the Feather Hyacinth alluded to, a rather warmer position. The bulbs should be planted during autumn at a depth of about three inches and about two inches apart.

ERYTHRONIUM HENDERSONII

DOG TOOTH VIOLET (Erythroniums)

If they had no other beauty than that of their richly mottled leaves, they would be well worth a place in the shady corner. Their flowers are 3 inches across, with stems 6 to 18 inches high. The colors run in delicate tints of white, pink, cream, bright yellow and rose. They are hardy in the coldest States, and while they are at their best in a loose, gritty soil, rich in leaf mold, they also thrive in woodlands, in shaded corners, or in the crevices of rockwork in shade.

Americanum. It produces in April, small, lily-like flowers, which vary through white, pink, bright yellow, rose, and cream. Bulbs should be planted about 5 inches deep. Doz., 65c; 100, \$4.50; 1000, \$40.00.

- 2 Chinese Sacred Lilies, mammoth bulbs.
- 6 Oxalis Grand Duchess Mixed.

Most of you know how easy it is to force into flower the beautiful, fragrant, Paper White Narcissus, in bowls of water. By using Vaughan's prepared bulb fibre in place of pebbles, the variety of bulbs that can be forced is widely increased.

METHOD OF FORCING BULBS IN FIBRE. Moisten Vaughan's Prepared Bulb Fibre to saturation, fill the bowl with wet fibre, and plant the bulbs allowing their necks to emerge from the fibre, but without pressing the fibre too firmly around them. Place the bowl in a cool, airy place where the light is dim or dark, and preferably the temperature does not rise above 55 degrees. Keep the fibre moist, since if it dries out the flower buds may go blind. But water sparingly until good roots have formed. When strong top growth has been made in the dark, take the bowl to a sunny window, where it will have fresh air, all the sunlight possible especially in the morning, and preferably a temperature not less than 55 nor more than 70 degrees.

Complete Directions for Planting and Forcing All These Subjects Are Included.

Vaughan's Giant Amaryllis

THE giant flowers and brilliant colors of our special strain of amaryllis won first prize at the great National Flower Show, held in Chicago, last March.

Of all bulbs which the amateur can grow successfully indoors, the Amaryllis is the largest, most beautiful, surest to flower and most easily handled. Our new hybrids, especially, are so gorgeous in size and coloring as to amaze those not familiar with them. From a single stem, spring from one to three lily-like flowers, six to eight inches in diameter.

Place only one bulb in each pot, covering it as far as the neck or upper narrow part. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.

After flowering they should be placed in a warm window, or set outside in sand or cinders and watered every day (sometimes twice a day), until the end of August when water should be gradually withheld and the bulbs allowed to go to rest. In the fall they can be forced again as with new bulbs.

Vaughan's New Hybrids. Largest flowers and most brilliant colors. Bulbs are two-inch and up in diameter. We can supply in separate colors in the following shades: Each, 75c; doz., \$7.50.

Dark Red	Orange Shades
Red Shades	Red with Light Stripes
Salmon	White Shades

VAUGHAN'S AMARYLLIS AT NATIONAL FLOWER SHOW, 1942

water, so it will not fill, is an excellent place to store the bulbs. The pots may be covered with leaves, straw, or even with ashes or sand; and brought in after eight weeks, when it is desired to begin forcing them. Figure on not less than five months before flowers are produced. After being brought into the house, a temperature of 60 degrees is sufficient until the formation of buds begins, and the best flowers will then be formed in a temperature of 68 degrees. All the light possible should be given after top growth begins. King Alfred is easiest to grow.

ALL DOUBLE NOSE BULBS

Emperor. The entire flower is a rich yellow trumpet of immense size and petals so broad that they overlap. Three of these bulbs planted in a 6-inch pot will make a splendid show. Each, 20c; doz., \$2.00; 100, \$13.00.

King Alfred. "The King of Yellow Daffodils." Tall, vigorous, golden yellow flower, of elegant form. The expanded trumpet measures 2½ inches in diameter, the perianth proportionately large and segments gracefully twisted. Each, 25c; doz., \$2.50; 100, \$16.00.

Spring Glory. A very early showy bicolor daffodil with large white perianth, broad and spreading, trumpet large and handsome, bright yellow with open frilled mouth. Each, 20c; doz., \$2.00; 100, \$13.00.

Ornithogalum

AUREUM. Of a rich apricot orange, this is perhaps the finest of ornithogalums. The flower stems are usually over a foot; with most of the upper half covered with flowers. THYRSOIDES FLORA PLENA. The flower has the keeping quality of the single and the appearance of a double Tuberose, with no strong odor. Three for 45c; doz., \$1.25; 100, \$8.00.

ARABICUM. Throws up a tall stem with a cluster of star-shaped flowers; pure white with dark centers. Excellent for cutting, lasting a long time in water. The Hardy Lilies

All Our Lily Bulbs Are Grown in U. S. A.

Hardier, More Vigorous, and Resistant to Disease

FOR the third year we are able to offer a complete list of lilies grown in America which experience has proved to possess so many advantages over imported bulbs.

First, they can be planted much earlier, and come to you without the weakening effect of a long ocean voyage. They are naturally more vigorous, and are already adapted to American climate and soil conditions; and they have been proved to be more resistant to diseases.

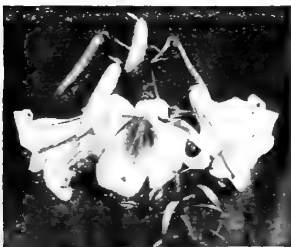

HOW TO GROW LILIES

LILIES are so beautiful, so fragrant, we are likely to think them too fine for the amateur to grow. But many are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium.

Outdoor Culture—When planting lilies out-of-doors, see that they have a well drained position, and where they will be shaded from very hot sun. Such places can usually be found around the shrub borders, and in the hardy plant border. Never mix manure in the soil around lilies, but enrich with a standard commercial plant food or with bone meal. Many varieties are termed "stemrooters," that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top-dressing of good rich soil on which they can feed freely. Spade over the ground thoroughly to a depth of 18 inches before planting lilies. Plant the bulbs 4 to 6 inches deep, depending on their size and the soil, deeper in light soil. Put some sand under and around the bulbs, and after covering protect with six or eight inches of leaves or other litter, which must be removed in late spring.

Indoor Culture—Lilies should be potted immediately upon receipt, if intended for growing in pots or for forcing. In potting use a compost of fibrous loam and sweet decomposed leaf soil, with plenty of coarse sand or a mixture of good peat, loam, and sand, adding to the compost a few pieces of charcoal. See that the pot is well drained. The bulb should be set about half-way down in the pot and barely covered with soil, thus leaving room to top-dress and fill the pot with more soil when stem-roots appear above the bulb. After potting, give a thorough watering and set outside in a cold frame or shady situation, then cover with ashes or long straw. After they have stood from three weeks to a month and thoroughly rooted, bring inside, in a temperature of about 60°; let the plants grow slowly under a bench or some other suitable place until about 6 inches high; then place on top of the bench in full light. An occasional application of liquid cow manure, starting about six weeks before flowering time, will stimulate the plant wonderfully. Thorough rooting is essential.

LILIAM CENTIFOLIUM

For those who have had trouble with mosaic disease, we are glad to offer, for the first time, a limited quantity of American-grown bulbs, free from mosaic. They should be planted in soil in which lilies have never been grown and at some distance from other lily plantings.

LILIAM TESTACEUM

Hardy Perennial Plants for Fall Planting

HARDY perennials may be set out this fall in time to become well established before winter sets in; and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

This advantage is accompanied with very little extra risk. We do not list the kinds which need special protection through the winter. It is always well to apply a mulch over newly planted perennials, after the ground has frozen. This will tend to prevent winter thaws and frost heaving. Plants should not be placed where water

stands, as excessive dampness in the winter causes rot during mild spells.

★Those indicated by a star are medium priced varieties of outstanding merit and are especially recommended for garden planting.

DYKES MEMORIAL MEDAL. This is an award made annually in America, France and England for the best Iris of the year.

As soon as German iris plants are received, plant them in a sunny, well drained place. Each plant should have at least eighteen inches clear space from other irises, as it will grow in a circle and many varieties spread rapidly. The rhizome, or fleshy root stock from which the leaves and roots grow, should be barely covered with soil, with the roots properly spread below, and the soil well firmed about them. Until the plant is established, give it frequent attention, watering in dry spells. In the first winter, after the ground has frozen, a light mulch to prevent thawing and heaving will be beneficial.

SIBERIAN IRIS

THERESE

JAPANESE PEONY

Vaughan's Peonies

PEAONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Planting. Peonies may be planted from September first until May. Orders should be sent in at once so that we can forward when weather permits. Avoid planting too deeply, as this is often the cause of shy blooming, 2 or 3 inches of soil over the crown (eyes) being sufficient. We offer Divided roots, natural divisions, having 3 to 5 eyes of blooming size.

The figures following the varieties are the rating given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Feeding. Peonies in established plantings need to be fed each Spring. A top dressing of Vaughan's Balanced Ration (5-8-7) well worked in will do wonders, but it should be applied early.

Roots by Parcel Post.—If to be sent by parcel post, add postage as follows: Single roots, 8c; two roots, 12c; 3 roots, 16c.

★Varieties indicated by star are of outstanding merit and are especially recommended by us for garden planting.

Hedges of Flowers, Fruit or Foliage

Increasing use of hedges is being made in landscape planting. In sections where evergreen hedges are difficult, a great variety of deciduous plants have been found to serve well.

We list on this page plants which have been found useful for planting in hedge rows. Among them will be found plants suitable for both tall and low hedges; some of which bear foliage only, and others which in addition to the thick wall of leaves necessary to produce a good hedge, will in season bear flowers, or fruit.

DELPHINIUM PACIFIC GIANT HYBRIDS

Annual Flower Seeds for Fall Sowing

WHEN you sow seeds of annuals in Fall, you imitate Nature's method. Practically all hardy annuals will produce stronger, sturdier plants with earlier bloom by this method. Even when spring sowing is desirable, experienced gardeners also sow in fall because they then have a continuous season of bloom. Also, they can sow at their leisure instead of trying to plant everything in a few short weeks. Do not be in too much of a hurry to sow.

The ideal time is just before the ground freezes for the winter. November 15th is early enough in normal seasons in the vicinity of Chicago and New York. If the ground has been prepared in advance, sowings can also be made during winter thaws.

A fine seed bed is desirable. No covering of any kind is needed unless there is danger of washing or from birds, in which case a light, loose covering of evergreen boughs can be used. Plant at half the depth used when sowing seed in spring. Broadcast all small seed.

Pansies and Violas must be sown early in September, but should then be protected with straw or glass sash during the winter.

Our Responsibility It is so manifestly impossible for a seller of any perishable article to be responsible for what may happen to it after it leaves his hands, especially one like seeds, which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to the crop which may be raised from seeds which we sell.

At the same time, in case of any failure to secure proper results caused from some inherent fault in the seeds themselves, Vaughan's Seed Store accepts responsibility, not for crop, but to the extent of the amount of money paid for the seeds, if immediately advised. Or seeds may be returned.

VAUGHAN'S SEED STORE, Inc., gives no warranty, express or implied, as to description, quality, productiveness or any other matter of any seeds, bulbs or plants it sells, and will not be responsible for the crop; and it gives no warranty express or implied, as to fertilizers, other than in respect to analyses or other data expressly and lawfully required of the seller by statutes.

Bulbs for Continuous Flowering

THE ADVANCED gardener knows that bulbs supply the dominant flowers for the first two months of the garden season, the time when garden beauty is most precious, and most rare.

The beginner finds that bulbs give him the surest and easiest success, of any flowers. Provided he plants quality bulbs, and follows a few simple rules, he can hardly fail to pro-

duce blossoms of the first rank on his first attempt. Not even cultivation is required for this harvest. No insects will prey upon the flowers of spring bulbs, and they have no diseases to require expert treatment.

Spring-flowering bulbs prolong the garden season by a month at least. Not only that, but among them are flowers which even did they

come in June, when gardens are crowded with glory, no gardener would be without.

The purchase of spring-flowering bulbs should not be considered an expense, to be charged to one garden season. It is an investment. A stock of bulbs has been known to produce flowers in the same garden for a century.

Even the labor of lifting bulbs after flowering may be dispensed with. All do excellently when left undisturbed year after year. This practice, indeed, is recommended for the daffodils. And tulips will suffer small loss if allowed to remain in a bed where they have done well, year after year. For this, plant them deeper, 8-inches in clay, 10-inches in sandy soil.

HOW TO PLANT BULBS

Plant all fall bulbs as soon as they can be obtained, and you are willing to disturb established beds. Daffodils and hyacinths benefit especially from early planting. Tulips should go in when the leaves of trees fall, so they have a season of growth before the ground freezes.

In case of necessary delay, all fall bulbs can be planted as late as the ground can be worked. A light mulch placed over the proposed plant-

ing spot will keep the frost out, if delay is unavoidable. A mulch over late planted bulbs placed after the ground is frozen, will prevent thawing and heaving.

A complete plant food applied to the soil at the rate of 5 pounds to 100 square feet, raked into the top soil after planting, will benefit the bulbs.

24 Scillas, 24 Grape Hyacinths, 24 Giant Tulips, 24 Hardy Daffodils, 24 Spring Snowflakes, 24 Lilium Tenuifolium, 12 Ornithogalum Umbellatum—156 bulbs.

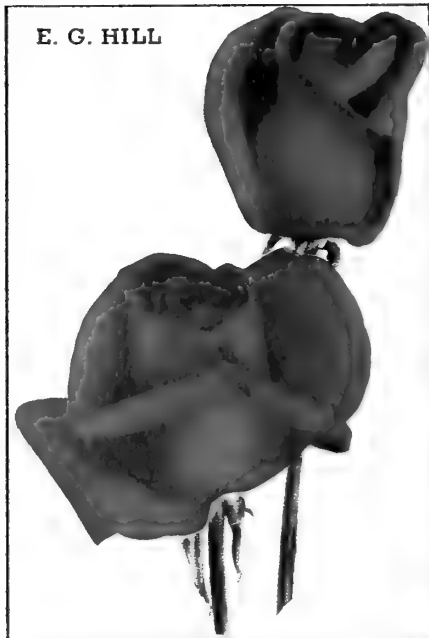

Use no manure with bulbs, unless it has been thoroughly rotted and can be spaded into the ground several months previous to planting.

If planting with a dibber, take care that the bulb rests on the soil and is not "hung"—that is, left with a hole beneath it caused by the point of the dibber.

ALL classes of roses benefit by fall planting when properly done, as it enables the plant to start growing earlier in the spring.

Planting Method: Select three or four sturdy stems and cut clean away all others, prune the selected stems back to four or five eyes. Set the plant deeply, so that the crown where the stems unite is covered and the stems rise out of the soil. When frosts begin hill soil six or seven inches high around each plant, and cover the ground about them with several inches of dry leaves, or strawy manure. In the spring, dead wood should be cut away and each stem cut back to three eyes.

Vaughan's Sampler: To prove to our customers the high quality of our perfumes, we have assembled a "Sampler" collection, featuring our ten leading fragrances, a full one-eighth dram of each, enough for several applications. All ten fragrances, \$1.00 postpaid.

Because we were able to fill in our stocks before all supplies of the vital essential oils from Europe and Asia were cut off, we now have at least a two year's supply of most odors in our store rooms. Since perfumes improve with age, those who know the high quality of our perfumes can purchase them with the assurance that this quality will be, if anything, better than before.

We still invite direct comparison with any imported perfumes that may still be available. Women accustomed to the finest imported perfumes of the exotic types are invited to try the following fragrances: Bouquet S, Bouquet X, Hawaiian Lei, Zanzibar, Calcutta, Victoria Regina, and Song of the Heart.

THE FOLLOWING ODORS ARE AVAILABLE IN EITHER COLOGNE OR PERFUME

(Cologne is about one-eighth the strength of perfumes (about double the strength of ordinary toilet water). It is used wherever a perfumed lotion is wanted—in the bath, on linens, or as a refreshing lotion.

Appleblossom: Soft, yet fresh and clean.

Bouquet S: A delicately feminine blend rich floral oils that in France and America is accepted as the leading type of odor in the better shops.

Bouquet X: Another blend, slightly "drier" and less sweet. An exotic fragrance preferred by women accustomed to the better French perfumes.

Carnation: Many acknowledge it as the best recreation of this beloved old favorite.

Forest Breeze: A smoky, piney fragrance—the scent of a pine forest on an autumn day.

Freesia: We are proud to have captured the elusive scent of this delicate flower.

Gardenia: Not sweet like so many "Gardenia" perfumes—a rich, intense odor

Geranium: Like a crushed leaf of the green plant.

Hawaiian Lei: A lovely blend of exotic tropical flowers.

Heather: A rich "smoky" or "peaty" fragrance that goes well with sport clothes.

Hyacinth: The most accurate recreation of this flower we know.

Lavender: The well-known English type, not sweet or "musky" like so many near-lavenders.

Lilac: Lilacs wet with morning dew. Fresh and leafy—our largest selling odor.

Lily of the Valley: At last, a satisfactory reproduction of this elusive scent.

Magnolia: The veritable fragrance of the Southern Magnolia—rich and lush.

Nicotiana: Reproduced with astonishing fidelity. The well-known "Sweet-scented Tobacco."

Parma Violet: A favorite for generations with women of wealth and refinement.

Red Rose: The Damask Rose type.

Sweet Pea: The true fragrance of the original Spencer sweet pea.

Violet: The English violet, softer than the Parma type.

Wild Rose: Like the breeze through a Sweet Briar hedge in June.

Zanzibar: Like a clipper ship laden with rare oriental woods and the spices of the Indies.

"Personalized Perfumes"

Dram, \$1.50; Ounce, \$10.00

We take pleasure in offering this group of highly individual, specially blended odors, which while not exactly matching the perfume of particular flowers, do express the enchanting fragrance of gardens and woodlands.

Calcutta: The oil from which this perfume was made was intended originally for introduction at \$75.00 an ounce by a famous French house. Escaping the fall of Paris, the perfumer brought this oil to America as his only remaining asset. We contracted for the entire stock. This is perhaps the last great perfume that will come from Paris until Germany falls.

The fragrance is that of the rich, opulent bouquets for which the French are famous, yet it is so dry and woody that it is not cloying. Outstanding.

Victoria Regina: Based on the formula for the consecrated oil used in anointing Queen Victoria at her coronation. Rich and fragrant. Not for the ingenué.

Song of the Heart: A dry, woody fragrance with no trace of sweetness, yet definitely not heavy. A perfume of unusual distinction.

Most Beautiful of the Parrot Tulips

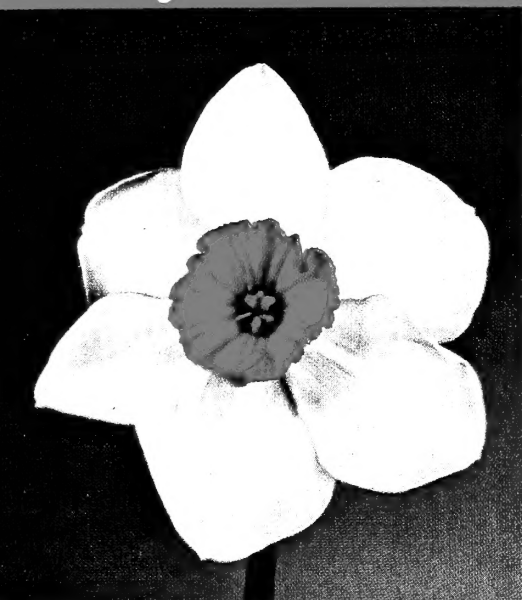

Tulip Fantasy

« 12 for \$1.70; 100 for \$13.00 »

WHILE resembling the Parrot type in the extraordinary size of its blossoms, and its beautifully fringed and fluted petals, Fantasy is really unique, perhaps the forerunner of a new race. It has a straight, stiff stem, which most Parrots lack, and this makes it stand up in the borders instead of hanging its head. Fantasy originated as a sport of the famous Darwin tulip Clara Butt, and perhaps its greatest charm is the clear, true pink color of its forerunner. There are many tulip fanciers who regard Clara Butt as most beautiful of all because of this color. But while Clara Butt is a relatively small Darwin, each petal of a well grown specimen of Fantasy will measure three inches long and two inches across. On the back of each petal is a marking of emerald green. A group of Fantasy in your border will be a center of interest in the tulip season and a never failing attraction to garden visitors.

Chinese Sacred Lily (Narcissus)

THIS narcissus is called by the Chinese the "Joss Flower" or "Flower of the Gods," and "Water Fairy Flower." It is highly prized for the abundance of its flowers and its marvelously rapid growth. The flowers are white, with yellow cup, and very fragrant. Each bulb produces several flower-spikes. In China the bulbs are grown in the living rooms in fancy bowls filled simply with pebbles and water. Place in a sunny window by day and on a table near the center of the room by night, as frost destroys the flower buds. Care should be taken that it is not placed in a draft, as this may cause non-flowering. Recommended for Christmas flowering.

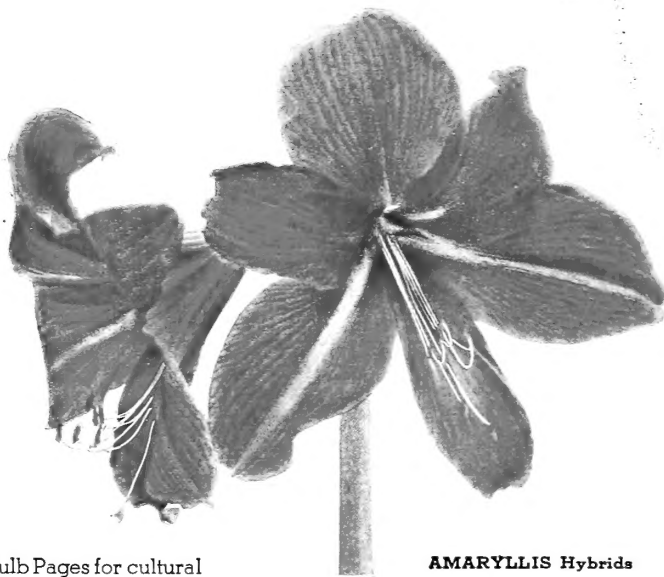

Large Bulbs, Each, 10c; three for 25c; per dozen, \$1.00; 100, \$7.00.
